EDUCATION

BS Data Science

Dawood University of Engineering & Technology
2nd Year · CGPA 3.55/4.0

Pre-Engineering

Govt College for Women, Nazimabad
2024 · Grade A · 71.64%

TECHNICAL SKILLS

Python	EXPERT
Scikit-learn	PROFICIENT
Pandas / NumPy	PROFICIENT
SQL	PROFICIENT
NLP	INTERMEDIATE
Matplotlib / Seaborn	INTERMEDIATE
Statistics	PROFICIENT

LANGUAGES

Urdu	Native
English	Fluent

Second-year BS Data Science student at Dawood University with hands-on internship experience in data preprocessing, predictive modeling, and NLP. Passionate about applying machine learning to solve real-world problems. Holds 10+ Google & IBM certifications, including the Google AI Professional Certificate, and maintains a strong academic record of 3.55 GPA. Actively seeking internship opportunities to bridge academic knowledge with industry impact.

EXPERIENCE

Data Science Intern

Apr 2026 - Present

Arch Technologies · Remote

- Cleaned, preprocessed, and built predictive models across 4 separate datasets/projects using Python, Pandas, and Scikit-learn — including a Titanic survival classifier (81% accuracy) and a Tesla stock LSTM model (RMSE 15.25).
- Applied feature engineering and model evaluation techniques (cross-validation, classification reports) to assess model performance and reduce overfitting.
- Collaborated with senior data scientists to generate analytical reports and surface actionable insights.

Data Science Virtual Intern

May - Jun 2026

DecodeLabs · Virtual Internship Program

- Completed a one-month virtual internship in Data Science, working on real-world tasks and projects in Python.
- Performed data cleaning, exploratory data analysis (EDA), and model building across assigned datasets.
- Demonstrated consistency and hands-on problem-solving throughout the program.

FEATURED PROJECTS

Sentiment Analysis Model

Built an NLP model to classify customer reviews as positive, negative, or neutral using TF-IDF vectorization and Logistic Regression, achieving 85% accuracy.

Python NLP Scikit-learn TF-IDF NLTK

Titanic Survival Prediction

Built a Logistic Regression classifier on 891 passengers (12 features), achieving 81% accuracy (F1-score 0.81, 5-fold CV mean 77.6%). Handled missing values across 3 columns and deployed as a live Streamlit app.

Python Pandas Scikit-learn EDA

Tesla Stock Price Prediction (LSTM)

Built a 5-layer LSTM model (30,651 parameters) on 1,256 days of stock data, reducing training loss from 0.0383 to 0.0037 over 10 epochs and achieving an RMSE of 15.25 on 240 test samples.

Python TensorFlow LSTM Time Series

Customer Segmentation

Applied K-Means clustering on retail shopping data with a full pipeline including PCA visualization and cluster profiling to identify customer segments.

Python K-Means PCA Pandas

Movie Rating Prediction

Built a collaborative filtering recommender using SVD on the MovieLens dataset, achieving an RMSE of ~0.88.

Python SVD Scikit-learn

VIRTUAL JOB SIMULATIONS

Data Analytics Job Simulation

Jun 2026

Deloitte · via Forage

- Completed practical tasks in data analysis and forensic technology as part of Deloitte's simulated work environment.
